Software developer focused on authentication and application security, with full-stack experience building a campus-wide ERP.

Education

Karunya Institute of Technology and Sciences <i>B.TECH IN COMPUTER SCIENCE AND TECHNOLOGY</i>	<i>2021 – 2026</i> GPA: 6.2
Devamatha CMI Public School <i>Grade 12</i>	<i>2019 – 2021</i> Percentage: 80%

Experience

Software Developer <i>CelerSCET</i>	<i>Thrissur, India</i> <i>May 2026 – Present</i>
- Core developer of a campus-wide college ERP (React, Node/Express, Supabase/PostgreSQL) serving ~2,000 users; built curriculum management, outcome-mapped course plans, assessments, and the examination office workspace. - Strengthened security and auditability: full audit trails on examination tables, caller-permission database views, and a unified OTP flow with resend throttling. - Cut the client entry bundle 18×, reduced the heaviest database I/O drains, and hardened Cloud Run deployment, health checks, and backups.	
Software Engineer Intern <i>FirstMeridian Business Services</i>	<i>Bengaluru, India</i> <i>Feb 2025 – Aug 2025</i>
- Implemented OAuth 2.0-based authentication securing sign-in for ~600 internal users. - Developed a role-based authorization system with 10 roles and permission levels enforced across 6 microservices. - Migrated ~800,000 records from Zoho Desk to Freshdesk with a custom script, resolving naming and value discrepancies with the vendor team.	
Head & Founder <i>Cyber Security Club (Karunya Institute of Technology and Sciences)</i>	<i>Coimbatore, India</i> <i>Aug 2022 – Oct 2024</i>
Founded and led a ~30-member cybersecurity club; organized 8 events and competitions, including hands-on workshops and CTF-style contests.	
Ethical Hacking Intern <i>Tech By Heart</i>	<i>Kochi, India</i> <i>April 2020 – May 2020</i>
One-month remote cybersecurity internship: client-side malware execution and privilege escalation in lab environments.	

Projects

NestJS-Oauth	 
NestJS application implementing JWT-based authentication with Role-Based Access Control (RBAC) and a user-management module.	
FastAPI-SSO	 
Secure SSO in FastAPI using Auth0 and a custom OAuth 2.0 flow (Google Cloud), with cookie-based sessions in a microservices architecture.	

Technologies

Languages: JavaScript, Python, SQL, HTML
Security & Auth: OAuth 2.0, SSO (Auth0), JWT, RBAC, audit logging
Frameworks & Infrastructure: React, Node.js, Express, NestJS, FastAPI, Supabase, PostgreSQL, MySQL, REST APIs, Google Cloud Run
